Subject:

Rush search request for 09/775693

Please search in commercial database and in issued patent files:

1) SEQ ID NO:1-and-a-polypeptide encoded by SEQ ID NO:1. Please check to see any of said polypeptide is the same as SEQ ID NO:7 or 8.

Thank you.
MINH TAM DAVIS

expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing in a patient's genome that affect the activity of p by expressing hactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, additionally, N may be used to produce the colon cancer decided in the prevention, diagnosis by inserting the nucleic acids into a host cell and culturing the cell by inserting the proteins. N and P can be used in the prevention, diagnosis to express the proteins. N and P can be used in the prevention of the and AAB77789 represent sequences used in the exemplification of the present invention.

N.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027 to 1052, 7921 and 7922.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ANH52304 to AAH53970 represent nucleic acids (I) encoding polypeptides CC (II), given in AAG881454 to AAG83120, from Staphylococcus epidermidis. CC (I) and (II) can have antibacterial activity and therefore can be used containing them which are used to produce the vaccination. The nucleic acids (I) may be used to produce the containing them which are used to produce hosts cells which express the CC used to vaccinate subjects and to raise antibodies against the bacteria. CC used to vaccinate subjects and to raise antibodies against the bacteria. CC treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to CC AAH55090 represent specifically claimed S. epidermidis. Government of the prosent intention. CC CAH55098 represent oligonucleotide sequences and primers which are used CC used to the exemplification of the present invention. AAH55091 to CC N.B. The present intention specifically claims all the polynucleotide contained sequences and primers which are used CC used neces given in the sequence listing of the present specification, cc though sequences are given in the disclosure for SEQ ID No:4454 so even cc mosequences are present for SEQ ID NO:4455 to 4461.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Corynebacterium glutamicum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         organic acid synthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Coryneform bacterium; amino acid synthesis; vitamin; saccharide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   18-DEC-2000; 2000EP-0127688
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            20-JUN-2001.
                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a area useful for identifying the mutation point of a gene derived from a analysing the expression profile or expression pattern of a gene derived analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing from coryneform bacterium. Coryneform bacteria are useful for producing producing from coryneform bacterian. Coryneform bacteria are useful for producing from coryneform bacterian. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nakagawa S,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WO200055351-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                       can be used in gene therapy. The colon cancer antigen polynicleotides, proteins and antibodies to the proteins are useful for the prevention, proteins and antibodies to the proteins are useful for the prevention, proteins and antibodies of colon disorders, such as colon cancer. The polynicleotides may be used in disorders, such as for polynicleotides may be used in disorders and research, such as for chromosome identification, and as hybridisation probes. The proteins chromosome identification, and as hybridisation probes. The proteins may also be used to prevent diseases such as neural disorders, immune may also be used to prevent diseases such as neural disorders, system disorders, muscular diseases, reproductive disorders gastrointestinal disorders, wounds, renal disorders, infectious diseases, and cardiovascular disorders. AAC98764 to AAC98772 and AAB54007 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        08-MAR-2000; 2000WO-US05883.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                21-SEP-2000.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAC97991 to AAC98763 encode the human colon cancer associated proteins, called human colon cancer antigens, given in AAB53234 to AAB54006. The human colon cancer antigens can have cytostatic, cardioactive, muscular; neuroprotective, immunomodulatory, gynaecological, gastrointestinal, neuroprotective, immunomodulatory, gynaecological, gastrointestinal, wilnerary, nephrotropic, antiinfective and antibacterial activities, and vulnerary, nephrotropic, antiinfective and antibacterial activities, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               N-PSDB; AAC98292.

                                                                                                          The present invention relates to human single exon nucleic acid probes (SEMP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SEMPs are derived from human HeLa cells. The SEMPs measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably

       The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of

   The present invention relates to novel single exon nucleic acid probes (see AAI00010-AAI10067). The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to toluene degrading enzyme genes and proteins tuth (see AAF23629 and AAB59831), tutl (AAF23630 and AAB59832), proteins tuth (see AAF23629 and AAB59833), and tuth (AAF23632 and AAB59834). The tuth (AAF23631 and AAB59834) are toluene degrading enzymes are useful for biological treatment of organic toluene degrading enzymes are useful for biological treatment of organic compounds and in particular for the degradation of toluene and its analogs contained in liquid or solid waste source. The present sequence analogs contained in liquid or analogs contained in liquid or solid waste source. The present sequence is a marting sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Composition comprising toluene degrading enzyme useful for biological treatment of organic compounds, especially for degrading toluene or its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Coschigano PW;

(AAV8280)) inserted between nucleotides 23050 and 2351, as set forth in AAV8280). The CDNA sequence is derived from clone NMDA24. The NMDAR subunits contribute to the formation of NMDA-activated cation-selective receptor subunit proteins, the nucleic acids are also useful as probes to Functional glutamate receptors can be assembled from several NMDA receptor subunit proteins of one type (homomeric) or from combinations of also comprises methods for using such receptor subunits to identify and agonists, antagonists and modulators of glutamate receptors. The present invention also comprises methods for determining whether unknown therefore is also comprises methods for determining whether unknown the function of such receptors.
    Sequence
                           protein(s) are functional as NMDA receptor subunits.
                                                                                                                                                                                                                                                                                                                         The present sequence represents a human N-methyl-D-aspartate (NMDA) receptor subunit (NMDAR). The nucleic acid sequence does not contain the 860 5'-most nucleotides, has an additional 11 nucleotides (AAV82891) between nucleotides 1300 and 1301, an additional 24 nucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                                             Example 3; Columns 261-268; 203pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DNA encoding N-methyl-D-aspartate receptor subunit - useful for the assembly of functional glutamate receptor subunits
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     N-PSDB; AAV82910.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Homo sapiens.
                                                                                                                                                                                                                                                                  The present sequence represents a human N-methyl-D-aspartate (NMDA) The nucleic acid sequence does not contain receptor subunit (NMDAR). The nucleic acid sequence does not contain the 366 5'-most nucleotides by the insertion of 11 nucleotides between nucleotides 1300 and 1301, nor the 15 nucleotides at positions the 1960-1974, nor the 1061 3' nucleotides, as set forth in AAV82889. The nucleotides is derived from clone NMDA21. The NMDAR subunits contribute to the formation of NMDA-activated cation-selective ion channels. In addition to being useful for the production of NMDA receptor subunit to to being useful for the production of NMDA receptor subunit proteins, the nucleic acids are also useful as probes to identify and isolate nucleic acids encoding related receptor subunits. Functional proteins, the nucleic acids encoding related receptor subunits. Functional places are also useful as probes to identify and proteins of one time of the production of NMDA receptor subunit isolate nucleic acids encoding related receptor subunits. Functional proteins of one time of the production of NMDA receptor subunit isolate nucleic acids encoding related receptor subunits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              20-APR-1994;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (SIBI-) SIBIA NEUROSCIENCES INC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         assembly of functional glutamate receptor subunits
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DNA encoding N-methyl-D-aspartate receptor subunit - useful for the
                                                                                                                                               proteins of one type (homomeric) or from combinations of submit proteins of different types (heteromeric). The present invention also comprises of different types (heteromeric). The present invention also comprises methods for using such receptor subunits to identify and characterise methods for using such receptor subunits to receptors, e.g. agonists, compounds which affect the function of such receptors, e.g. agonists, antagonists and modulators of glutamate receptor function. The invention also comprises methods for determining whether unknown protein(s) are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is a subunit (designated NMDARIA) of the human N-methyl-D-aspartate (NMDA) receptor. This is an ionotropic glutamate receptor which contains cation-specific ligand-gated ion channels. The protein and its coding sequence can be used in disease diagnosis and in research to identify other, similar proteins. They can also be used as probes, for example in genetic screening, and in drug screening, as well as enabling the production of animal disease models.

A;Title: Molecular definition of bovine argininosuccinate synthase deficiency.
A;Reference number: A33986; MUID:90046714
A;Recession: A33986
A;Molecula type: mRNA
A;Residues: 1-412 <DEN>
A;Residues: 1-412 <DEN>
A;Cross-references: GB:M26198
C;Comment: This enzyme catalyzes the formation of argininosuccinate from citrulline a C;Superfamily: argininosuccinate synthase
C;Superfamily: arginine biosynthesis; homotetramer; ligase; urea cycle
C;Keywords: arginine biosynthesis; homotetramer; ligase; urea cycle
F;149,153/Binding site: Mg-ATP (Glu, Arg) #status predicted
